Introduction

Executive Summary

EG Fashion is an online platform that gathers fresh fashion designers and upcoming stylists as well as small clothes shops. This platform should allow these startups to exhibit their work and products to be available all around the country. It should offer an easy way for these startups to market their work and make it popular and well-known. EG Fashion can be used by everyone who is interested in shopping or designing their own costumes for big events like weddings, engagements, proms, birthdays, graduations, etc. EG Fashion is the direct easy way for all designers and small shop owners to exhibit their products for everyone through a simple click.

Document Overview

This document introduces EG Fashion system description, system functions, system modules, system models and system interface.

System Description

Introduction

EG-FASHION connects different customers with shop owners and fashion designers easily. Customers can search for different shops and search for what they need from shops' stock or they can search for designers to match their favorite styles. Customers can search for designers by their regions of operation or even search for products by their type. Shops can present their clothes and sort them by size, color, style and number of available pieces. Designers can show their previous designs to attract customers.

Accounts organization

The system offers three types of accounts: customers, shop owners and fashion designers. There is also an option to visit the site as a visitor without the need of an account to view the system features and take the decision to sign up and join the site. Every account has its features and issues in its way.

Searching and filters

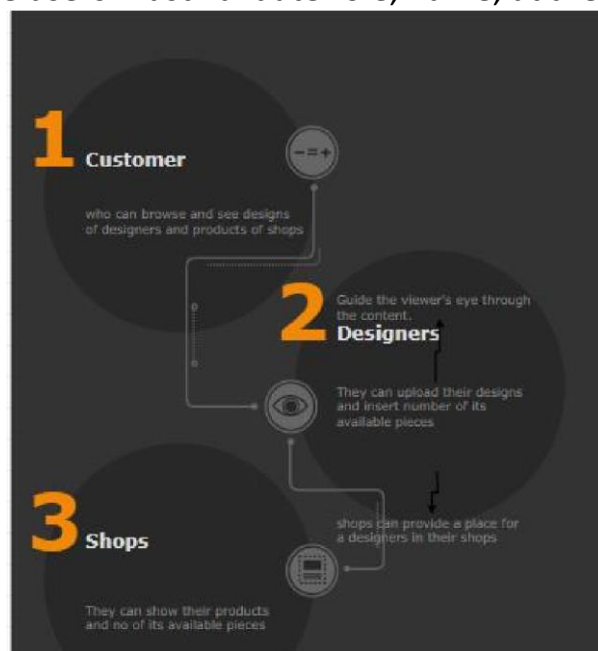

Customers can search for shops and designers by searching in a certain region or they can search for clothes directly using filters made by the site and filled by shop owners. These filters include prices, colors, sizes and styles. Searching has a smooth interface for fast usage and better interaction with no time wasting.

Users

- **Shop owners:** Responsible for exhibiting their products on the site.
- **Fashion Designers:** Responsible for exhibiting their designs on the site.
- **Customers:** They visit the website to search and browse for products that matches their interests.

Modules

- **Customers:** A module for customers with sub modules of registered customers and guests (visitors). Customers can search for products/shops/designers and filter different products. They can also give reviews and read others reviews
- **Shop Owners:** A module for shop owners. They can upload pictures of their products, search other shops' products and receive customers' reviews.
- **Fashion Designers:** A module for fashion designers. They can add designs, contact shop owners for business and receive customers' reviews.
- **Sign up module:** A module for signing up as customer, shop owner and designer. Site users must validate role, name, address, mail,.....

System Users

Customers

Customers must have internet access for this service. Customers can search for clothes they need in filters of sizes, categories and colors. They can contact shops or order from website and cash on delivery. Customers can also contact fashion designers and shops, view their products and choose what they like. Customers can review different shops and fashion designers and view others' reviews about them.

Fashion Designers

Fashion designers can advertise for their work and show their different designs. Designers can develop a good idea of the customers' preferences by checking different customers' reviews. Designers can present their work by uploading pictures of their different designs. They can view shops' products and fill the market's needs.

Shop Owners

Shop owners can present their products, advertise their offers and announce them quickly. They can view customers' reviews and develop a good idea about the quality of their products as most customers view other customers' reviews and trust them. Shop owners can contact fashion designers for business. They can also view other shops' products and compare different prices of different products.

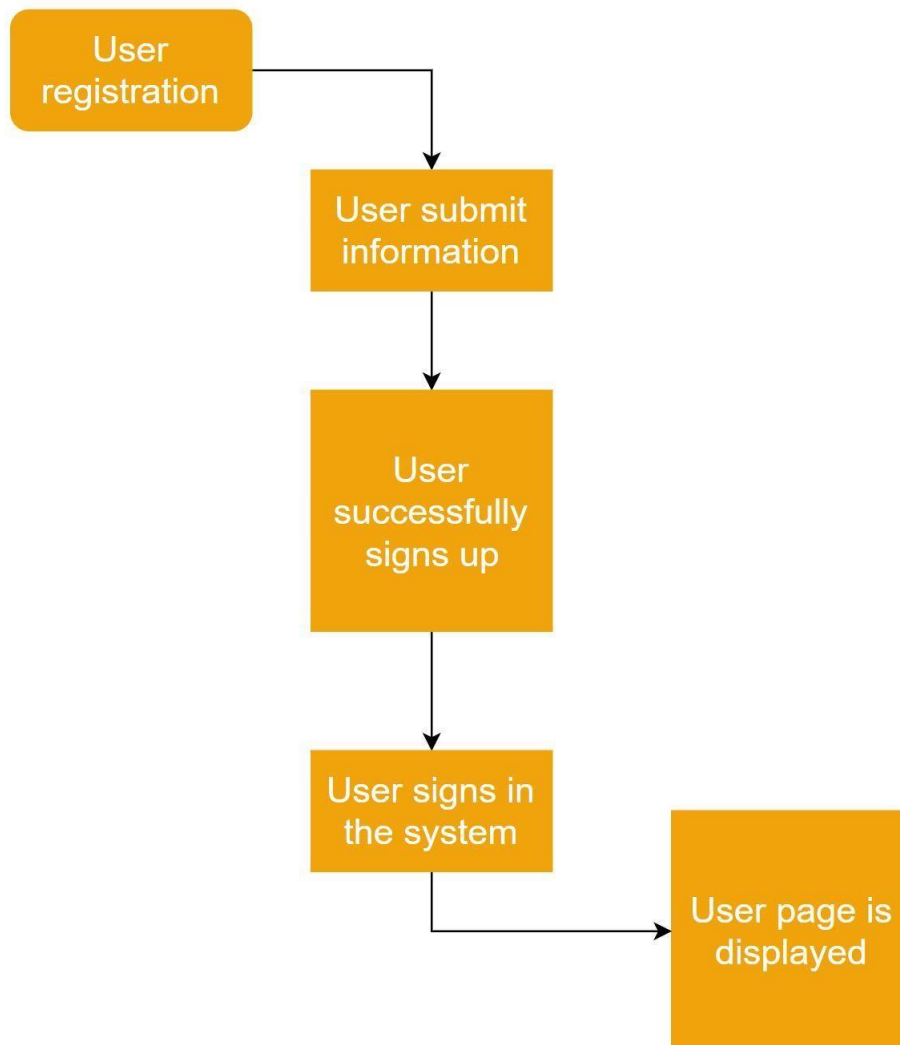

System Modules

Sign UP Module

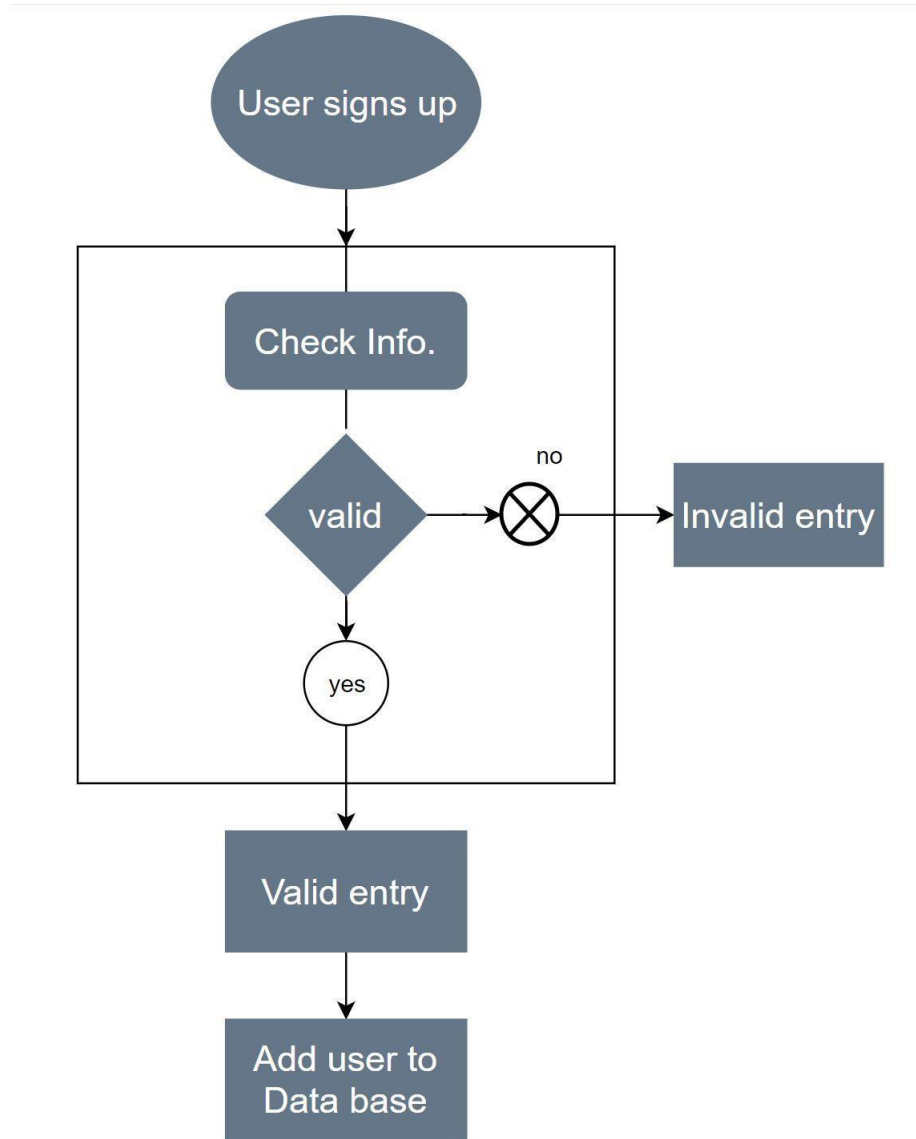

This module allows users to sign up and specify their role as customers, shop owners or designers, provide different information as address, e mail and password. lock Diagram:

Sequence Diagram for Any user.

This sequence diagram is for whoever the user,
If he is customer , designer or shop.

Sequence Diagram for Customer.

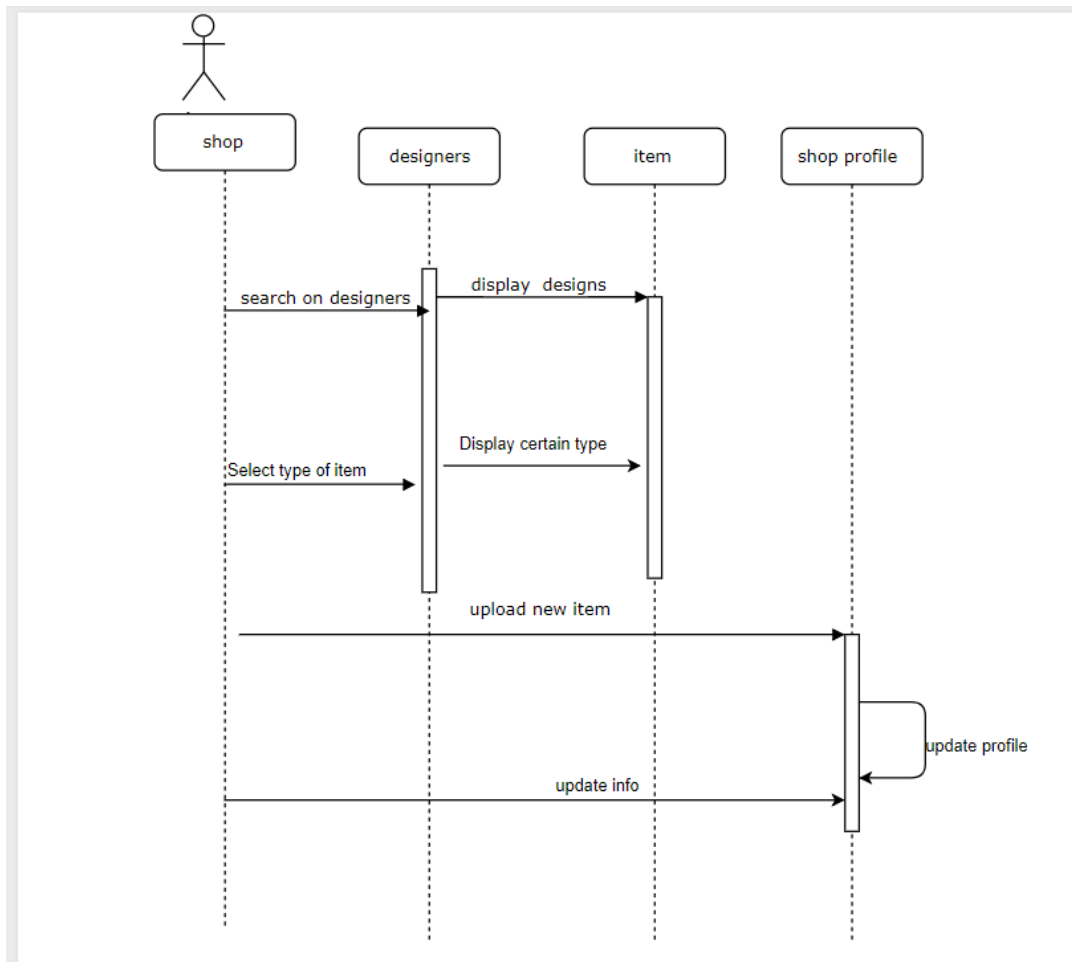

This sequence diagram is for only customer interface with the system.

Sequence Diagram for Designers.

This sequence diagram is for only designer interface with the system.

Sequence Diagram for Shops

This sequence diagram is for only shop interface with the system.

Non-Functional Requirements

Security

The system should guarantee for all the users that their personal data is secure also their search history and their purchasing orders must not be public.

Performance

The system should not take long time while searching for certain/multiple items in the database.

The system should not crash if multiple users access the website at the same time through different devices.

Usability

The system should be usable and the user whatever if he was customer , designer or shop found it easy to upload ,search or update info.

Its also should has fast response and various types of items and different areas.

Domain Requirements

Items Filtering

A filtering algorithm should be provided for the users in order to be able to search for a certain product without going through all the items on the website. The filters should enable the user to filter the items according to their color, size, type and price.

Areas

The filtering algorithm should also be provided for the users in order to be able to search for a certain area without going through all the items on the website. The filters should enable the user to filter the items according to their color, size, type and price.

Shop/Designer

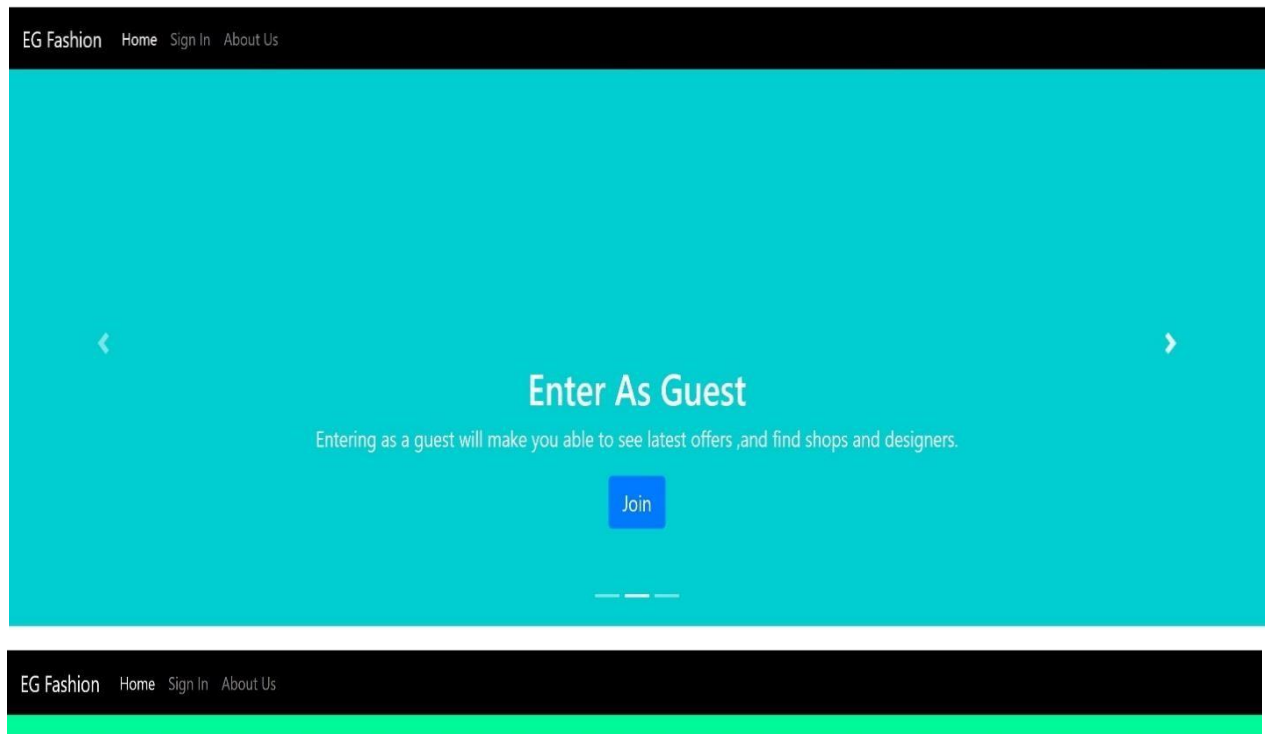

The customer can search on certain designer/shop to see its products .
